

THE SCIENCE OF READYSM

SOUTH 4 GROUP FIRE

Port Neches, TX

Property Assessment Summary

December 12, 2019

Project #112322

1.0 Introduction

Beginning on December 1, 2019, CTEH® initiated observational assessments and collection of potential facility-related debris in the adjacent community near the TPC Group facility located in Port Neches, Texas. These observational assessments, debris collection, and sampling events have been driven by concerns over bulk debris potentially containing asbestos, which may have been dislodged or mechanically disturbed during the South 4 Group Fire and subsequently transported to off-site locations. The property assessments were conducted at various locations, including residential, commercial, and public areas within the community surrounding the TPC Group facility.

This report summarizes the analytical sampling data from wipe and bulk samples collected during property assessments conducted from December 1st, 2019 to December 10th, 2019 and laboratory reports received as of December 11th, 2019.

2.0 Bulk and Wipe Sampling Methods

CTEH has developed and implemented a Community Assessment Plan for the South 4 Group Fire Response. The Community Assessment Plan was approved by local, state, and federal representatives of the on-site Unified Command (UC). **Attachment A** contains an incident site map and sampling locations map.

Following the field collection of potential facility-related debris, samples were sent to an American Industrial Hygiene Association (AIHA)-accredited laboratory for analysis. Bulk samples were analyzed for the asbestos content and fibers using the EPA 600/R-93/116 Method involving polarized light microscopy. In addition to bulk sample analysis, CTEH collected wipe samples to verify the presence/absence of asbestos fibers on indoor and/or outdoor surfaces associated with residences that reported potential terminal debris on their property. Wipe samples were analyzed for the presence of asbestos fibers via ASTM Method 6480.

3.0 Analytical Sampling Results

A summary of bulk and wipe sample results is included in Tables 1 and 2, respectively. **Attachment B** and **Attachment C** include tables of bulk and wipe sample results, respectively, broken down by location.

Table 1. Property Assessment Bulk Sampling Summary
Data as of 12/11/2019 1700 CST

Analytical Method	Analyte	# Laboratory Results	# Detections	Range of Detections (%)
EPA 600/R-93/116	Asbestos Type	208	86	2 – 55 %

Table 2. Property Assessment Wipe Sampling Summary
Data as of 12/11/2019 1700 CST

Analytical Method	Analyte	# Laboratory Results	# Detections of Asbestos Type	Range of Detections* (Asbestos Structures)
ASTM Method 6480	Asbestos Type	166	0	< 2.99 asbestos structures

*Non-detections are reported with a "<" symbol as the value is reported below the laboratory detection limit.
